Technology and Learning

The VOCTEC program offers a variety of digital resources as part of its online courses which are designed to enhance and extend the learning process that starts with a face-to-face class.

Website

The online courses are available to the instructors and students of VOCTEC trainings and workshops and to the public.

Through the online courses, users can:
- Network with other educators and technicians in the field
- Extend their knowledge by exploring additional resources and tools
- Sharpen their skills with practice and refresher material

Gaming

VOCTEC is using interactive computer games as a way to engage students and stimulate learning. Along with lectures and hands on labs, gaming sessions give trainees an additional avenue to test their knowledge and put their skills into practice.

By employing short “burst” game sessions and puzzles, students get reinforcement of key concepts in the material being taught.

Offline

The limited internet access in many developing countries doesn’t prevent VOCTEC students from taking advantage of digital learning. Trainees are provided with removable media such as USB drives containing course material and games.
